In Europe and the U.S. populations of these larvae and adults have developed resistance to chemical insecticides such as the organochlorines and DDT. The toxins encoded by these sequences, and intact cells that are capable of expressing the proteins, can be used to control many pests of the family scarabaeidee, such as species of Cyclocephala, and Popillia. The toxins are active against larvae (present in soil) and against adults.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1089
             against Coleoptera against Coleoptera against Coleoptera (laim 3; Fig 1; 30pp; English. The BtPGS1208 strain was isolated from grain dust and was deposited at the DSM (19/1/1989) under Acc. No. 5131. The protoxin crystals produced on expression of the gene can be digested with trypsin to produce the mature protein. Plants conty the gene are resistant to Coleoptera pests while the crystals are useful as insecticides.
                                                                                                                                                                                                                                                                                                                                                          btPGS1208 gene.

                                                                                                                                                                                                                                         Claim 13; Page 25-27; 38pp; English.

The sequences given in 028653-55 encode lepidopteran-active toxins. These sequences were used within a Tior Ri plasmid, to transform plant cells. Whole plants can then be regenerated from the transformed cells. The toxin may also be produced by cloning bacillus thuringiensis (Bt). It may then be applied directly to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11-SEP-1992; U07697.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note-*Organ: mixed (see below); Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHPU, and fetal heart NbHH19W) were mixed, and scircles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-345479, and 484488-489479.*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        note-Torgan: lung; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Plasmid DNA from the normalized library NCI_CGAP_LUS was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 1520904-1522349). Subtraction by Bento

Determination of this BAC-end sequence was carried out as part of
collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila
                                                                                                                                                                                            Drosophila melanogaster

For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     OM protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Searched:
            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
          protein search, using sw model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query

For example, bacteriophage lambda ZAP, containing the entire coding sequence of the IFN-alpha and beta receptor (Q30533), was incubated with oligos Q30534 and Q30535. R28496 represents the complete receptor. R28495 lacks the transmembrane and cytoplasmic domains. Both forms bind IFN in the same way as antibodies so are immunosuppressants e.g. for treating autoimmune diseases and graft rejection. They lack the toxic side-effects of known immunosuppressants such as steroids.

This recombinant human alpha interferon (IFN) receptor protein useful for the testing of IFN agonists and for treatment and dinosis of viral diseases and tumours. Antibodies raised against this protein can be used for blocking the receptor when require eg where overexpression of alpha-IFN is harmful. The Abs are also useful for eg drug targetting. Variants of the protein, having residue 164 (Thr) replaced by Arg and an Asp inserted between residues 479 and 480, are also useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        02-MAY-1991.

Sequence of a soulble form of the interferon (IFN) receptor with a high affinity for IFN-alpha and -beta.
Interferon receptor; alpha-interferon; beta-interferon..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New water-soluble polypeptide(s) with affinity for IFN-alpha and beta - used to treat e.g. lupus erythematosus, Behcet's disease, aplastic anaemia, diabetes mellitus, rheumatoid arthritis, etc. Disclosure; Page 47; 52pp; French.

The invention covers derivatives of the interferon-alpha and/or beta receptor obtained by deleting the transmembrane and cytoplasmic domains of the native receptor or by substitution. Potentially immunogenic epitopes are eliminated and the deriv. can be secreted from transformed cells. Soluble deriv.s block the activity of IFN alpha/beta and can be used to treat autoimmune diseases or to inhibit graft
